Características

- ✓ **Simplicidade, valor do XP**
- ✓ **CLI (*command line interface*)**
- ✓ **Versatilidade**
- ✓ **Download and run! (pré-requisito: JRE 8)**
- ✓ **Seleção de métricas, correlacionadas e ordenadas**
- ✓ **Visualizações usando Google Chart e D3.js**
- ✓ **Atualmente analisa projetos Java**

Funções

- ✓ **Resultados em diferentes formatos**
Console, JSON, CSV
- ✓ **Filtragem dos 'Top X'**
- ✓ **Resultados contextualizados**

drtools-metric - helping you to improve the health of your source code and reduce technical debt!
```

```
Developed by Guilherme Lacerda (guilhermeslacerda@gmail.com)
```

```
Usage: drtools-metric <project-directory> <OPTIONS> <OUTPUT> [--top <number>]
```

```
OPTIONS = <-a|-ac|-s|-n|-t|-m|-d|-cd|-id|-c|-mt> OUTPUT = <--console|--csv|--json>
```

```
Where
-a      list ALL metrics (namespaces/types/methods)          --console      show the results to console
-ac     list ALL metrics about COUPLING/DEPENDENCIES           --csv          generate results in CSV format
-s      list a SUMMARY of project                             --json         generate results in JSON format
-n      list information about NAMESPACES                      --top          list top 'number' records, based on used format
-t      list information about TYPES (classes)
-m      list information about METHODS (functions)
-d      list information about DEPENDENCIES of types/classes
-cd     list information about CYCLIC DEPENDENCIES of types/classes
-id     list information about INTERNAL DEPENDENCIES of types/classes
-c      list information about COUPLING of namespaces
-mt     list information about METRIC THRESHOLDS
```

```
Metrics
CA - Number of types/classes outside this component that depends on types/classes inside this component (Afferent Coupling)
CE - Number of types/classes inside this component that depends on types/classes outside this component (Efferent Coupling)
I - Instability of namespace (range between 0=Maximally stability and 1=Maximally instability)
A - Abstractness degree of namespace (range between 0=Minimally abstractness and 1=Maximally abstractness)
D - Normalized distance of namespace from the main sequence
NAC - Number of abstract types/classes of package/namespace   WMC - Weighted methods per types/classes (sum the CYCLO of each method)
NOC - Number of types/classes of package/namespace           SLOC - Number of lines of source code
DEP - Number of type/classes external dependencies            I-DEP - Number of type/classes internal dependencies (Fan-Out)
NOA - Number of attributes/variables                          NOM - Number of methods/functions of a type
NPM - Number of public methods/functions of a type           NBD - Number of nested block depth of a method/function
MLOC - Number of lines of a method/function                  PARAM - Number of parameters of a method/function
CYCLO - Cyclomatic complexity (McCabe) of a method/function  CALLS - Number of invocations made from within a method/function
```

32 Heurísticas de Análise

drtools.site

Heurísticas - Summary

- 1. Contexto que fornece informações gerais sobre dimensões do Projeto**
Indicativo de filtrar melhor as informações usando a opção '--top X' para ajudar no entendimento (Classificação: SMALL, MEDIUM e LARGE)
- 2. Considere o número médio de classes por namespace**
Indicativo de que as classes não estão distribuídas uniformemente
- 3. Avalie o número médio de SLOC por classes**
Indicativo de classes muito grandes
- 4. Observe a distribuição média de métodos por classes**
Indicativo de muitos comportamentos por classe
- 5. Considere a complexidade média por classes**
Indicativo de como está a complexidade das classes em geral

Heurísticas - Namespaces

6. Observe a distribuição de classes por namespace

Se um namespace tem muitas classes (NOC alto), pode ser um indicativo de 'promiscuous package'

7. Avalie a distribuição de tipos abstratos (classes abstratas, interfaces) por namespaces

Indicativos para extensão e reuso

8. Avalie a relação das métricas NOC e NAC do namespace

Uma diferença muito grande entre eles pode indicar uma má distribuição entre tipos abstratos e tipos concretos

Heurísticas – Types (1)

9. Avalie as métricas além do SLOC

WMC, DEPS (DEP e I-DEP) e NOM/NPM são bons indicativos de como está a classe

10. Classe com NOA alto, mas baixo WMC e NOM alto

Pode ser um indicativo de POJO (Plain Old Java Object)

11. SLOC alto, mas sem muitos métodos (NOM/NPM baixo)

Pode ser um indicativo de 'long methods'

12. SLOC e WMC alto, mas sem muitos métodos (NOM/NPM baixo)

Pode ser um indicativo de 'complex class'

13. NOM/NPM alto pode ser indicativo de classe com muitas responsabilidades

Indica baixa coesão e possivelmente 'god class'

Heurísticas – Types (2)

- 14.** **NOM/NPM alto e NOA baixo pode ser indicativo de classe com muitas responsabilidades**
Pode ser um indicativo de uma classe 'controller'
- 15.** **NOM alto e NPM baixo pode indicar que o comportamento foi dividido**
Indicativo de métodos private/protected/default
- 16.** **NOA alto pode ser indicativo de classe com muitas responsabilidades**
Pode ser um indicativo de baixa coesão, dificultando a manutenção
- 17.** **DEP alto e I-DEP baixo pode indicar uma classe com muitas dependências externas**
Dependências de APIs externas (frameworks, libs)
- 18.** **I-DEP alto (e por consequência DEP alto), pode indicar uma classe com muitas dependências de classe do projeto**
Incidência de alto acoplamento

Heurísticas – Methods

- 19.** PARAM alto pode ser indicativo de método com baixa coesão
Possivelmente é um 'long method'
- 20.** CYCLO alto e MLOC baixo pode ser um 'complex method'
Indicativo de problema de complexidade, legibilidade e entendimento
- 21.** NBD alto pode ser um 'complex/long method'
Indicativo de problema de complexidade, legibilidade e entendimento
- 22.** CALLS alto pode indicar alto acoplamento
Indicativo de problema de várias dependências
- 23.** MLOC alto, CYCLO alto, CALLS alto e NBD alto é forte indicativo de mais de um problema
Pode ser um indicativo de um 'complex/long method'

Heurísticas – Coupling (1)

24. Evite dependência cíclicas

Tornam as mudanças complexas e gera a 'síndrome da compilação total'

25. CA alto pode indicar que o namespace é estável

Se ele mudar, vai fazer com que quem dependa dele seja alterado

26. CE alto pode indicar que o namespace é instável

A incidência de mudança em outros namespaces que ele depende vai fazer com que ele mude

27. I indica como está a instabilidade do namespace

I=0, namespace estável ao máximo; I=1, namespace instável ao máximo

Heurísticas – Coupling (2)

- 28.** Se $I=0$, indica que $CA > 0$ e $CE=0$, indica uma estabilidade total
Ele é responsável e independente. Os dependentes tornam difícil alterá-lo e não tem dependência de outros que pode forçar a mudança
- 29.** A indica como está o grau de abstração do namespace
 $A=0$, namespace não tem tipos abstratos; $A=1$, namespace somente possui tipos abstratos

Heurísticas – Coupling (3)

- 30.** Considere namespaces que estão nas zonas de exclusão

Zone of Pain (namespaces com I e A próximos a 0) e Zone of Uselessness (namespaces com I e A próximos a 1)

- 31.** Namespace situado próximo a sequência principal indica que não é abstrato nem instável demais

Valor de D (entre 0 e 1) que vai indicar a posição na sequência principal

- 32.** D indica o quão longe um namespace está da sequência principal

D próximo a 0 indica proximidade da sequência principal; D próximo a 1, indica distância da sequência principal

Estes valores (mais próximo a 1) podem indicar quando um namespace está passível de manutenção e menos sensível a mudanças
